

New Application lists

UP GRADE ACTUATOR

- Stabilizes the boost pressure at high RPM.
- Precise control of the boost is achieved at maximum boost.
- By employing the turn-buckle rod, boost setting can be adjusted without removing the actuator from the engine.
- Vehicle specific design, bolt-on installation. (Excludes some applications)
- More stable control of the boost can be achieved when used in combination with SBC series boost controller.
*ECU resetting and Boost limit cut may be required.
- Actuator unit is machined Aluminum with a blue anodized finish for high quality looks.
- High corrosion resistance with chrome plated bracket and stainless steel rod.
