

New Product information

Mono tube type shock absorber is used for all lineup. Low friction, large 44mm diameter piston (some vehicle is not applicable) quickly respond to the input for initial damping to achieve the comfortable ride and controllability.

Separate tank system.

Separate tank is used to achieve the better damping force at low speed.

Hose line which is a characteristic for separate tank type is not used(except some vehicle) for easy installation.

32 ways damping rate

Damping rates are 32- way adjustable for both front and rear. Wide adjustability results in the high balance of the driving performance and ride comfort from the street to the race track.

Durability

Special material is generously used for each component. And black chrome plating is applied to the cylinder case.

Brackets are nickel plated and special coating (anodized for aluminum models) for the best anti-corrosion capability.
