ラテラルリンクの位置を適正化します。(ロールセンターを上げる)

BLITZ INFORMATION

- The roll center becomes altered when lowering the vehicle. With this product the roll center will be adjusted and every suspension component will be relocated to its optimal position for proper movement. Stability of the vehicle and handling will improve with greater rear traction.
- An eccentric shaft is utilized for the lower control arm installation bolts. A wide range, non-step adjustment of the camber angle is achieved. With optimal surface contact of the tires, uneven tire wear can be prevented.
- Camber Adjustment Range : $-5^{\circ} 00' \sim -2^{\circ} 00'$
- Vehicle Height Adjustment : $-80\text{mm} \sim -30\text{mm}$
