The MIRACLE CAMBER ADJUSTER](#)

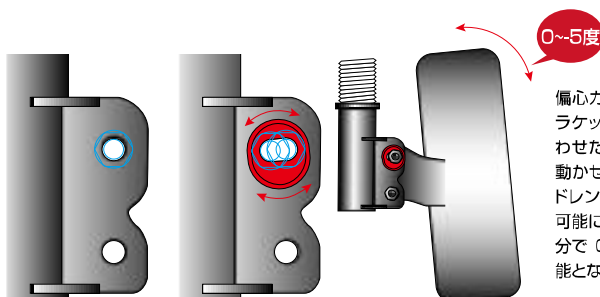

### ■ Product Description

- Optional parts specifically for the DAMPER ZZ-R lower brackets allow simple and unrestricted control of the camber angle for strut type front suspensions.
- An eccentric shaft is utilized for the installation bolts. A wide range, non-step adjustment of the camber angle can be achieved.
- With a broader range of alignment, optimal surface contact of the tires can be achieved while preventing uneven tire wear. Furthermore handling is improved and adjustments to fit wider wheels become easy.
- Stays to lock brake and ABS lines in place are standardly equipped. The positioning of the stabilizer links have been optimized for some models. Installation is completely bolt-on.
- Camber Adjustment Range :  $-5^{\circ}00'$  ~  $+1^{\circ}00'$

- ※ Depending on the camber angle the tire or wheel may come in contact with the shock absorbers.
- ※ Use with stock stabilizer.

### ■ Product Image

ダンパーを固定するボルトが動くスペースはないためキャンバー調整はできません。

偏心カムを採用した車種別ブラケットの穴形状とそれに合わせた専用のボルトを容易に動かせるため、簡単且つワイドレンジでキャンバー調整が可能になります。ブラケット部分で 0 度 ~ 5 度まで調整可能となります。
