Sma Thro X

Compatibility List

Crown Crossover Service Panel
Installation Example

Product Characteristic

- The popular Sma Thro has evolved offering greater ease of installation at an affordable price.
- Ultra-compact switch allows an easy ON/OFF control, while the rotary dial on the main unit let you fine tune the throttle response with 10 selectable modes.
- The switch can be installed directly or with a dedicated switch adapter and service panel adapter (※).
- Features a completely plug-and-play design with a low-power circuit. +12V wiring is not required.
- The newly developed high-performance microcontroller provides direct, high-speed control, improving response and tracking to accelerator signals for smoother acceleration and deceleration.
- Depending on your preference switch between ON or OFF start modes when the engine is started.
- Reverse Cancel Harness (Sold Separately) allows automatic safety function that returns the system to normal when the reverse gear is engaged.

Upgrades from the Previous model.

- The main unit now separates the rotary mode selector from the harness connection side, allowing for a cleaner and smarter installation layout.
- A built-in buzzer provides audio feedback, making setup and operation more intuitive.
- A newly designed control circuit expands compatibility to vehicle models that were previously unsupported by the previous Sma Thro.
- The ON/OFF start mode can now be switched directly via the main switch—even without connecting the optional Reverse Cancel Harness.
- The optional Reverse Cancel Harness (sold separately) now uses a plug-type connector instead of a crimp-style terminal, allowing for an even simpler and more streamlined installation.

※ Please check compatibility of the service panel.

Even if the service panel is compatible, there must be an open panel to install the switch.
Make sure to check your vehicle's switch panel shape and availability of an open slot.

Rotary Switch

Harness Installation

Example of Kit including Service Panel

※This product does not change the maximum output of the vehicle.

※The feeling of improvement in acceleration and response will differ between people

※Compatible with various manufacturer's safety features.
