Product Characteristics

- A new model of the “Power Con” is able to increase power without the need for complex wiring or initial setup. Optimizes boost for turbocharged vehicles and airflow sensor control for naturally aspirated (NA) vehicles.
- Compatible with over 190 domestic vehicle models, ranging from sports cars to minivans, SUVs, and K-cars, both turbocharged and NA engines.
- Each unit is specifically tuned and set to an optimized ratio for each vehicle type, allowing power increases within the control range of the factory ECU while minimizing the load on the engine.
- Completely plug-and-play installation with no need for additional wiring or modification. Everything is completed within the engine bay for easy installation.
- Includes all necessary parts for installation.

Improvements form the Previous Model

- Equipped with a new side switch on the main unit that allows selection between OFF / Mode 1 / Mode 2. In addition to Mode 2, which provides the same power increase as the previous model, a new Mode 1 has been added that delivers a milder power output by reducing the output ratio to approximately half. Furthermore, while the previous Power Con required removing the connector to return to stock settings, this can now be done simply by operating the switch.
- The product lineup for NA and turbocharged engines has been unified, making it easier to choose the product.
 - ※ Even when the control ratio is reduced to approximately half, the increase in power and torque may not necessarily be reduced by half depending on the vehicle.

Test Vehicle : Fairlady Z (RZ34 MT)

【Mode 2】Max Output Difference 49.6PS /

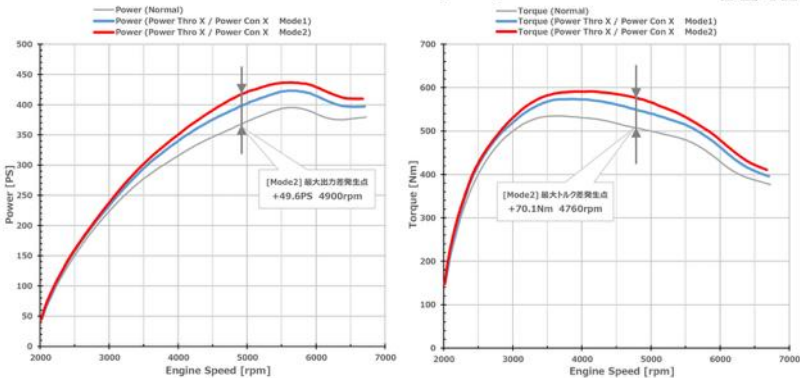

Max Difference in Torque 70.1Nm Up!

【Mode 1】Max Output Difference 30.6PS /

Max Difference in Torque 44.2Nm Up!

Installation example
on GR86

- ※ The feeling of improved acceleration, response, or power may vary from person to person.
- ※ Output measurements are based on tests conducted using our in-house chassis dynamometer, comparing the results of a stock vehicle and one equipped with the Power Con.
- ※ Output values may vary depending on individual vehicle differences. Please note that these figures are for reference only.
- ※ Compatible for use together with BLITZ AIR FILTER Series and AIR CLEANER Series products. Compatibility with air filters or air cleaners made by other manufacturers has not been confirmed.
- ※ Cannot be installed on vehicles equipped with ECU reprogramming, pressure sensors, airflow sensors, or other electronic parts that modify these systems.
