## ■ Product Characteristics

- **Motion Control Beam(MCB)** suppresses twisting and deformation of the body.  
This allows the suspensions to perform at their full potential.  
The MCB also absorbs unpleasant vibration for a more refined riding experience.
- Body roll and pitching is reduced with the MCB.  
Furthermore, steering response and stability is improved for greater handling during cornering.
- With our expertise in suspension, the most effective mounting position has been tested and verified.
- Includes BLITZ aluminum logo sticker, as well as blue and red sheets.  
Accent the MCB to match the style of the engine room.

Please check our website for further information

## ■ Product Description

- Install along with the stock body brace to limit body deformation.
- 3000N can be equipped along with stock and ZZ-R suspension.
