				3000N	92228	4959094922285

■ Product Characteristics

- **Motion Control Beam(MCB)** suppresses twisting and deformation of the body. This allows the suspensions to perform at their full potential. The MCB also absorbs unpleasant vibration for a more refined riding experience.
- Body roll and pitching is reduced with the MCB. Furthermore, steering response and stability is improved for greater handling during cornering.
- With our expertise in suspension, the most effective mounting position has been tested and verified.
- Includes BLITZ aluminum logo sticker, as well as blue and red sheets. Accent the MCB to match the style of the engine room.

Please check our website for further information

■ Product Description

- For stock suspensions 3000N, for DAMPER ZZ-R 1000N is recommended.
 - Left and right rear bumper beams are secured together to limit torsional deformation and enhance suspensions performance.
 - Rear bumper does not need to be removed for installation.
- (*May vary depending on body kit)
